

CLAIM

1. A cooking rack adapted for use in cooking of various food products by placing said products on said rack, said cooking rack comprising:

a main oven rack constructed of materials capable of being subjected to relatively high temperatures;

5 said main oven rack having a cutout portion extending perpendicularly through a plane of said main oven rack;

a frame wire surrounding the periphery of said cutout portion;

a revolving apparatus having an outer perimeter frame;

10 said revolving apparatus comprises support means for supporting said food products on said revolving apparatus;

pivot means pivotally coupled to said main oven rack and connected to said revolving apparatus so as to provide for said revolving apparatus to rotate or otherwise revolve relative to said main oven rack.

2. A cooking rack in accordance with claim 1, characterized in that said cooking rack further comprises means for supporting said cooking rack on a lower surface, with a plane of said lower surface being substantially parallel to the plane of said cooking rack.

3. A cooking rack in accordance with claim 1, characterized in that said cooking rack further comprises a plurality of said cutout portions, and a plurality of said revolving apparatus positioned within said cutout portions.
